Fundamentals of Physics I

Instructor: TBA

E-mail: TBA

Time: October 21, 2024 - November 22, 2024

Office Hours: 2 hours (according to the teaching schedule)

Contact Hours: 45 (50 minutes each)

Credits: 3

Course Description

Fundamentals of Physics I is a general education course designed as an introduction to college physics for students majoring in the biological, environmental, earth, and social sciences, as well as disciplines such as architecture, business, and the humanities. The main emphasis of the course is on the fundamentals of Newtonian mechanics and the physics of fluids. The goals of this course are to provide the student with a clear and logical presentation of the basic concepts and principles of physics, and to strengthen student's understanding of concepts through a range of interesting applications to the real world, including practical examples that demonstrate the role of physics in our universe.

Course Requirements

College Physics 2e from OpenStax College

Textbook. Go to <https://openstax.org/subjects> and click on green colored College Physics 2e to download the e-book.

A laptop or desktop with camera

Access to a scanner or cell phone with Adobe Scan App for preparing pdf files.

A calculator with square-root, square, sine, cosine and tangent functions.

Access to reliable and high-speed internet connection.

WeChat account

Course Structure

This course covers 5 units on the topics listed below:

Unit 1: Units and significant figures, one and two-dimensional kinematics, position, velocity, and acceleration vs. time graphs, free-fall, projectile motion, vectors, trigonometric analysis of vectors, coordinate systems and vector components

Unit 2: Newton's three laws of motion, identifying forces, Hooke's law, static and kinetic friction, drag, free-body diagrams, equilibrium, statics in two dimensions, motion on inclined planes, dynamics in two dimensions, ropes and pulleys.

Unit 3: Impulse, momentum, the impulse-momentum theorem in one and two dimensions, conservation of momentum, collisions, work, power output, kinetic energy, gravitational potential energy, elastic potential energy, thermal energy, the work-energy theorem, and conservation of energy

Unit 4: Rotational motion, equations of motion for rotational motion, centripetal forces and accelerations, center of mass, torque, gravitational torque and stability, rotational inertia, Newton's second law for rotational motion, angular momentum, conservation of angular momentum, rotational kinetic energy

Unit 5: Fluids, pressure, hydraulic lifts, Buoyancy, fluid dynamics and Bernoulli's principle.

Assignments of the course

There will be a total of 600 points which will be convert to a percentage to assign letter grade (shown in grading scale in the next page).

Tests - 300 points.

There will be three unit tests at the end of first three units, each worth 100 points.

Tests will be administered on Tuesdays at 8 am Beijing time. Each test will be proctored through zoom video link and each student will be given 2-hour time to complete each unit test.

Homework - 100 points.

Four weekly homework will be assigned on Mondays at 9am and will be due on Fridays at 10:00 pm Beijing time.

Final Exam – 200 points.

The final is cumulative and required. Final exam will be proctored through zoom video link and each student will be given 2-hour time to complete final exam.

Grading Scale

The instructor will use the grading system as applied by JNU:

Definition	Letter Grade	Score
Excellent	A	90~100
Good	B	80~89
Satisfactory	C	70~79
Poor	D	60~69
Failed	E	Below 60

Summary of due dates (based on Beijing time)

	Monday	Tuesday	Wednesday	Thursday	Friday
Week 1					Homework 1 due 10 pm
Week 2		Unit Test 1 8-10 am			Homework 2 due 10 pm
Week 3		Unit Test 2 8-10 am			Homework 3 due 10 pm
Week 4		Unit Test 3 8-10 am			Homework 4 due 10 pm
Week 5					Final Exam 8-10 am

Online Submission Procedures

In order to receive any grade for your assignments or tests, you must do the followings:

There are two ways to submit assignments and you will let TA know which way will work best for you.

Option 1: If you have a printer, print the assignment and fill in the answers. Then take a picture on each page (note one picture per page to have the words large enough to read). Use Adobe Scan App to convert images into a pdf file. Submit this pdf file. Check your submission before logging off the system.

Option 2: Write the answers, your name and student ID clearly on your electronic device. Save the file as pdf. Submit this pdf file. Check your submission before logging off the system.

Late Assignments and Make-up Exams

All the tests and assignments must submit online (see “online submission procedures” for general assignment guideline). Please inform the instructor if you foresee any difficulty in meeting required item listed (see page 1) on day 1 of this class.

All assignments must be submitted by the deadline to avoid penalty (-10% to -100%) in grade.

Late submission MAY be accepted with valid medical reason. After the late submission is accepted, the instructor reserves right to give zero grade and deduct points according to his discretion for late submission.

NO mark-up exam is allowed for final exam.

Class Schedule

Week 1:

- a. Units and significant figures
- b. Motion in one dimension
 - i. Average vs. instantaneous speed
 - ii. Velocity
 - iii. Uniform Acceleration
 - iv. Free-fall
- c. Graphing motion
 - i. Position, velocity, and acceleration vs. time graphs
- d. Vectors
 - i. Trigonometric representations of vectors
 - ii. Coordinate systems and Vector components
 - iii. Projectile motion

Week 2:

- a. Motion and Force
 - i. Newton's first law
 - ii. Identifying forces: friction, normal, tension, etc..
 - iii. Free-body diagrams
 - iv. Newtons Second Law
 - v. Applying Newton's Second Law in 1 and 2D
 - vi. Newton's Third Law
- b. Equilibrium
 - i. Static and dynamic equilibrium
- c. Dynamics and Newton's second Law
- d. Mass vs. weight and weightlessness
- e. Inclined planes
- f. Friction and drag
- g. Pulley systems

Week 3:

- a. Momentum and Impulse
 - i. Conservation of momentum
 - ii. Impulse-momentum Theorem
 - iii. Inelastic collisions vs elastic collisions
- b. Work and Energy
 - i. Work and power
 - ii. Kinetic energy
 - iii. Gravitational potential energy
 - iv. Elastic potential energy
 - v. Work-energy theorem
 - vi. Conservation of energy

Week 4:

- a. Rotational motion
 - i. Uniform circular motion
 - ii. Centripetal forces and accelerations
 - iii. Angular displacement, velocity, and acceleration
- b. Torque
 - i. Gravitational torque and center of gravity
- c. Rotational dynamics
 - i. Moment of inertia
 - ii. Newton's second law for rotational motion

Week 5:

Fluids

- i. Pressure
- ii. Buoyancy
- iii. Fluid dynamics
- iv. Pascal Principle
- v. Archimedes Principle
- vi. Bernoulli Principle

Academic Integrity

As members of the Jinan University academic community, students are expected to be honest in all their academic coursework and activities. Academic dishonesty, includes (but is not limited to) cheating on assignments or examinations; plagiarizing, i.e., misrepresenting as one's own work any work done by another; submitting the same paper, or a substantially similar paper, to meet the requirements of more than one course without the approval and consent of the instructors concerned; or sabotaging other students' work within these general definitions. Instructors, however, determine what constitutes academic misconduct in the courses they teach. Students found guilty

of academic misconduct in any portion of the academic work face penalties that range from the lowering of their course grade to receiving a failing grade (E) in the course.
